

# SNAP

## CONNECTOR AND SPACER FOR DECKS

### VERSATILITY

It can be used both as a concealed connector for boards and as a spacer between boards and battens. SNAP is developed to be used individually but also in combination. In this case, SNAPS have dual functionality as connector and spacer, for maximum efficiency and convenience.

### MICRO VENTILATION

When used as a spacer, SNAP prevents water stagnation thanks to the micro-ventilation created under the decking boards.

### DURABILITY

PP (glass fiber reinforced polypropylene) material provides excellent durability at an affordable price.
